EDUCATION

Massachusetts Institute of Technology	5/2024 – present
<i>MicroM.S. in Statistic and Data Science</i>	<i>Massachusetts, USA</i>
Tsinghua University	9/2023 – present
<i>M.S. in Electronic and Information Engineering</i>	<i>Beijing, China</i>
Zhejiang University	9/2019 – 6/2023
<i>B.S. in Marine Science</i>	<i>Hangzhou, China</i>
Zhejiang University	9/2019 – 6/2023
<i>B.E. in Electronic Science and Technology (Double Degree)</i>	<i>Hangzhou, China</i>
<ul style="list-style-type: none">○ GPA: 3.91/4.00; Ranking: 1st/20○ Courses: Linear Algebra, Complex Function, Partial Differential Equation, Probability Theory and Statistics, Stochastic Process, Object-Oriented programming, Data Analysis and Algorithm Design, Fundamentals of Numerical Simulation and Machine Learning, Calculation Method, Signals and Systems, Digital Signal Processing, Digital Image Processing, Automatic Control Theory, Underwater Robot Design.	

RESEARCH

Reinforcement Learning (RL), Large Language Model (LLM), Multi-Agent Systems, Planning and Control

EXPERIENCES

Tsinghua University, Department of Electronic Engineering

12/2022 – present

Graduate Researcher

Advisor: Prof. Yong Ren

- **Environment-Aware Reinforcement Learning:** Proposed environment-aware reinforcement learning (RL), a new paradigm for RL utilizing large language model (LLM), diffusion model, and the physics-informed neural network (PINN). Specifically, I first used PINN to simulate the environmental information around the agent, then I introduced the information into the state space for RL training and LLM-enabled agent optimization. After several iterations, the policy and optimization of the agent reached expert level. Then we utilized it to generate the offline dataset, which was further used as input for diffusion model. Finally, with PINN's inversion function, the agent achieved superior performance and environment-aware capability.
- **Multi-AUV Collaboration via Reinforcement Learning:** Developed a simulator with reinforcement learning environment to realize efficient multi-AUV training in the extreme ocean conditions. Then I designed an efficient multi-AUV training framework to improve the collaboration between each AUV, taking the factors of ocean turbulence into consideration. The framework consists of two stages: policy improvement and offline training. Utilized imitation learning and offline reinforcement learning algorithms as the optimization method for multiple objectives. Finally superior performance was achieved in the multi-AUV collaboration data collection task, and target tracking task.

Research Assistant

Advisor: Prof. Shuai Zhang

- **Large Language Model-driven Multi-task Reinforcement Learning:** Utilized the large language model to produce interpretable and free-form dense reward functions while realizing iterative refinement with human feedback. Finally, we applied generated reward functions in the multi-AUV underwater data collection task to realize policy improvement, which can be modeled as a multi-task reinforcement learning problem. Experiment results demonstrated the superior performance and robustness of reward functions generated by large language model.

- **AoI Optimized Markov Decision Process:** Proposed an AoI optimized Markov decision process (AoI-MDP) to improve the performance of underwater tasks. Specifically, AoI-MDP models observation delay as signal delay through statistical signal processing, and includes this delay as a new component in the state space. Additionally, AoI-MDP introduced wait time in the action space, and integrated AoI with reward functions to achieve joint optimization of information freshness and decision-making for AUVs leveraging reinforcement learning for training.

Research Assistant

Advisor: Prof. Miao Liu

- **Adversarial Density Weighted Regression Behavior Cloning:** Proposed ADR-BC, an enhanced Behavior Cloning (BC) method that improves policy optimization by utilizing density-based action support. ADR-BC aligns closely with expert distributions while avoiding suboptimal ones. Experimental results demonstrate that ADR-BC outperforms the state-of-the-art IL methods in Gym-Mujoco tasks.
- **ContextFormer: Stitching via Expert Calibration:** Developed ContextFormer, which combines contextual imitation learning and sequence modeling to stitch trajectory fragments by emulating expert trajectories. Our evaluation shows that ContextFormer achieves competitive results on D4RL benchmarks and outperforms various Decision Transformer variants, demonstrating its superior performance.

PROFESSIONAL ACTIVITIES

Conference Session Chair	2024
◦ IEEE Wireless Communications and Networking Conference (WCNC)	
◦ OCEANS	
Conference Reviewer	2025
◦ International Conference on Learning Representations (ICLR)	
◦ IEEE / CVF Computer Vision and Pattern Recognition Conference (CVPR)	
Conference Reviewer	2024
◦ IEEE International Conference on Robotics and Automation (ICRA)	
◦ International Conference on Artificial Neural Network (ICANN)	
◦ International Joint Conference on Neural Networks (IJCNN)	

SELECTED HONORS

First-Class Scholarship (<i>awarded to top graduate students at Tsinghua University</i>)	2024
Outstanding Graduate (<i>awarded to top undergraduates at Zhejiang University</i>)	2023
National Encouragement Scholarship (<i>3% at Zhejiang University</i>)	2022
Zhejiang Province Robot Competition (<i>the second prize</i>)	2022
Zhejiang University Underwater Robot Design Competition (<i>the first prize</i>)	2022
Top Ten College Student (<i>0.6% in LanTian Community of Zhejiang University</i>)	2021
Nandu First-Class Scholarship (<i>0.2% at Zhejiang University</i>)	2021
Zhejiang Provincial Government Scholarship (<i>3% at Zhejiang University</i>)	2021

SKILLS

Languages	Chinese (native), English (IELTS: 7.0, Speaking: 6.5)
Programming	Python (Pytorch), MATLAB/Simulink, ROS, C/C++, Ansys Fluent
